

## The Wildnote Solution for Mitigation Banking

**More than just a wetland app** – Wildnote supports all aspects of mitigation bank construction, restoration, monitoring, and reporting. Imagine eliminating the many repetitive tasks of data collection, photo management, and tedious report building, while your projects become more accurate, efficient, and profitable. Replace paper workflows with digital speed.

- Reduce errors and eliminate inconsistency with custom survey forms
- Eliminate transcription by collecting data on your mobile device
- Export data and photos directly into agency-ready reports

“Without Wildnote, it took about a week to QA/QC and complete paper data forms on a wetland delineation with more than 200 mapped features. Using Wildnote on a comparable project cut the QA/QC time for data forms down to a day. The time saved in not having to decipher messy handwriting is worth it alone!”

— **Sheryl Creer, Stantec**

## Streamlined Mitigation Bank Assessments, Monitoring and Reporting

### Wetland Delineation and Restoration

Increase accuracy and efficiency with digital USACE Regional Wetland Delineation Data Forms and Exports

- Taxonomy – Intuitive auto-population eliminates inaccuracies and inconsistencies
- Taxonomy favorites float to the top of the list for one-click selection
- Sample points – pre-populate or add to list while offline
- Smart searchable Munsell Soils dropdown list
- Mobile offline calculations for:
  - Indicator status
  - Dominant species
  - Dominance test worksheet
  - Prevalence index worksheet
  - Hydrophytic vegetation indicators
  - FAC-Neutral Test
- Advanced tools for photo management and post-processing of data
- Choose the export format: PDF, Excel, Word, KML, GeoJSON, GDB

### **Stream Restoration**

- Pre-construction surveys, Site Assessments
- Erosion & Sediment Control Inspections
- SWPPP and Spill Reports
- Construction Monitoring
- Biological Monitoring
- Bank Erosion Hazard Index surveys (BEHI)

### **Habitat Conservation Bank - Biological Surveys**

- Endangered species surveys including botanical, wildlife, and nesting birds
- Resources assessment with locations
- Vegetation monitoring

## **Go Fast and Get it Right**

Ease the pain of data management and add precision at the same time with tools for:

### **Photo Management**

- Automatically attach photos to surveys including metadata, captions, lat/long
- Manage all project photos at once from the Gallery View
- Bulk download and rename photos with project relevant information
- Wetland photo export with options for intro and closing paragraphs along with selected photos

### **Post Processing of Data**

- Edit multiple surveys directly in the new grid layout
- Filter and group by date or sampling points
- Bulk export multiple data sheets

### **Mapping**

- Geotag photos and drop latitude and longitude points within a survey
- Capture sub-meter accuracy with the EOS Arrow integration
- Export data to GeoDatabase and GeoJSON file formats for easy ESRI integration
